ONC/CMS Program to Get to Meaningful Use

Adapted from: Blumenthal D. Launching HITECH. N Engl J Med. 2010 Jan 4.
<http://healthcarereform.nejm.org/?p=2669>

12 Key Workforce Roles Supporting the HITECH Agenda for Health Care and Public Health

- **Six Roles Requiring Six Month Preparation**
 - Assumes some relevant background (health or IT)
 - Four roles support EHR adoption process (mobile adoption teams)
 - Two roles provide ongoing support to practices that have adopted
- **Six Roles Requiring 1-2 Year Preparation**
 - Also assumes relevant background (health or IT)
 - Chief Clinician Information Officers
 - Software developers
 - Researchers and specialists

ONC Health IT Workforce Development Program

Four *Integrated* programs:

1. Community College Consortia to Educate Health IT Professionals
2. Curriculum Development Centers
3. Competency Examination for Individuals Completing Non-Degree Training
4. Assistance for University-Based Training

SHARP Research Program

- Strategic Health (IT) Advanced Research Projects
- Breakthrough research
- Four sites, with multiple collaborators, funded at \$15M each for four years
- Each site addressing one theme:
 - Patient-centered cognitive support (Texas-Houston)
 - Security (U of Illinois)
 - Secondary use (Mayo Clinic)
 - Advanced network and application platforms (Harvard)

Getting to Meaningful Use: The “Element” View

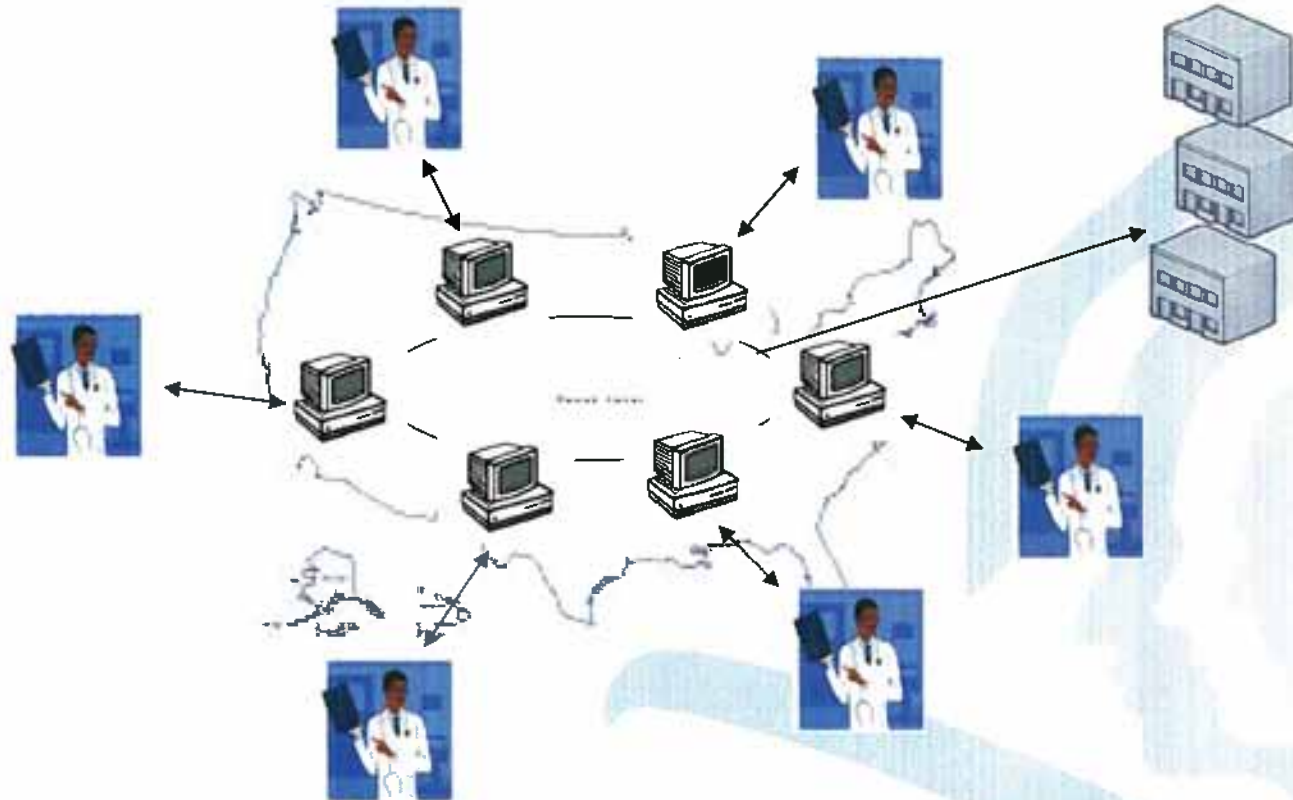

Element 1: **Adopted** Health IT Systems

Element 2: A **Trusted Pathway** to Exchange Information

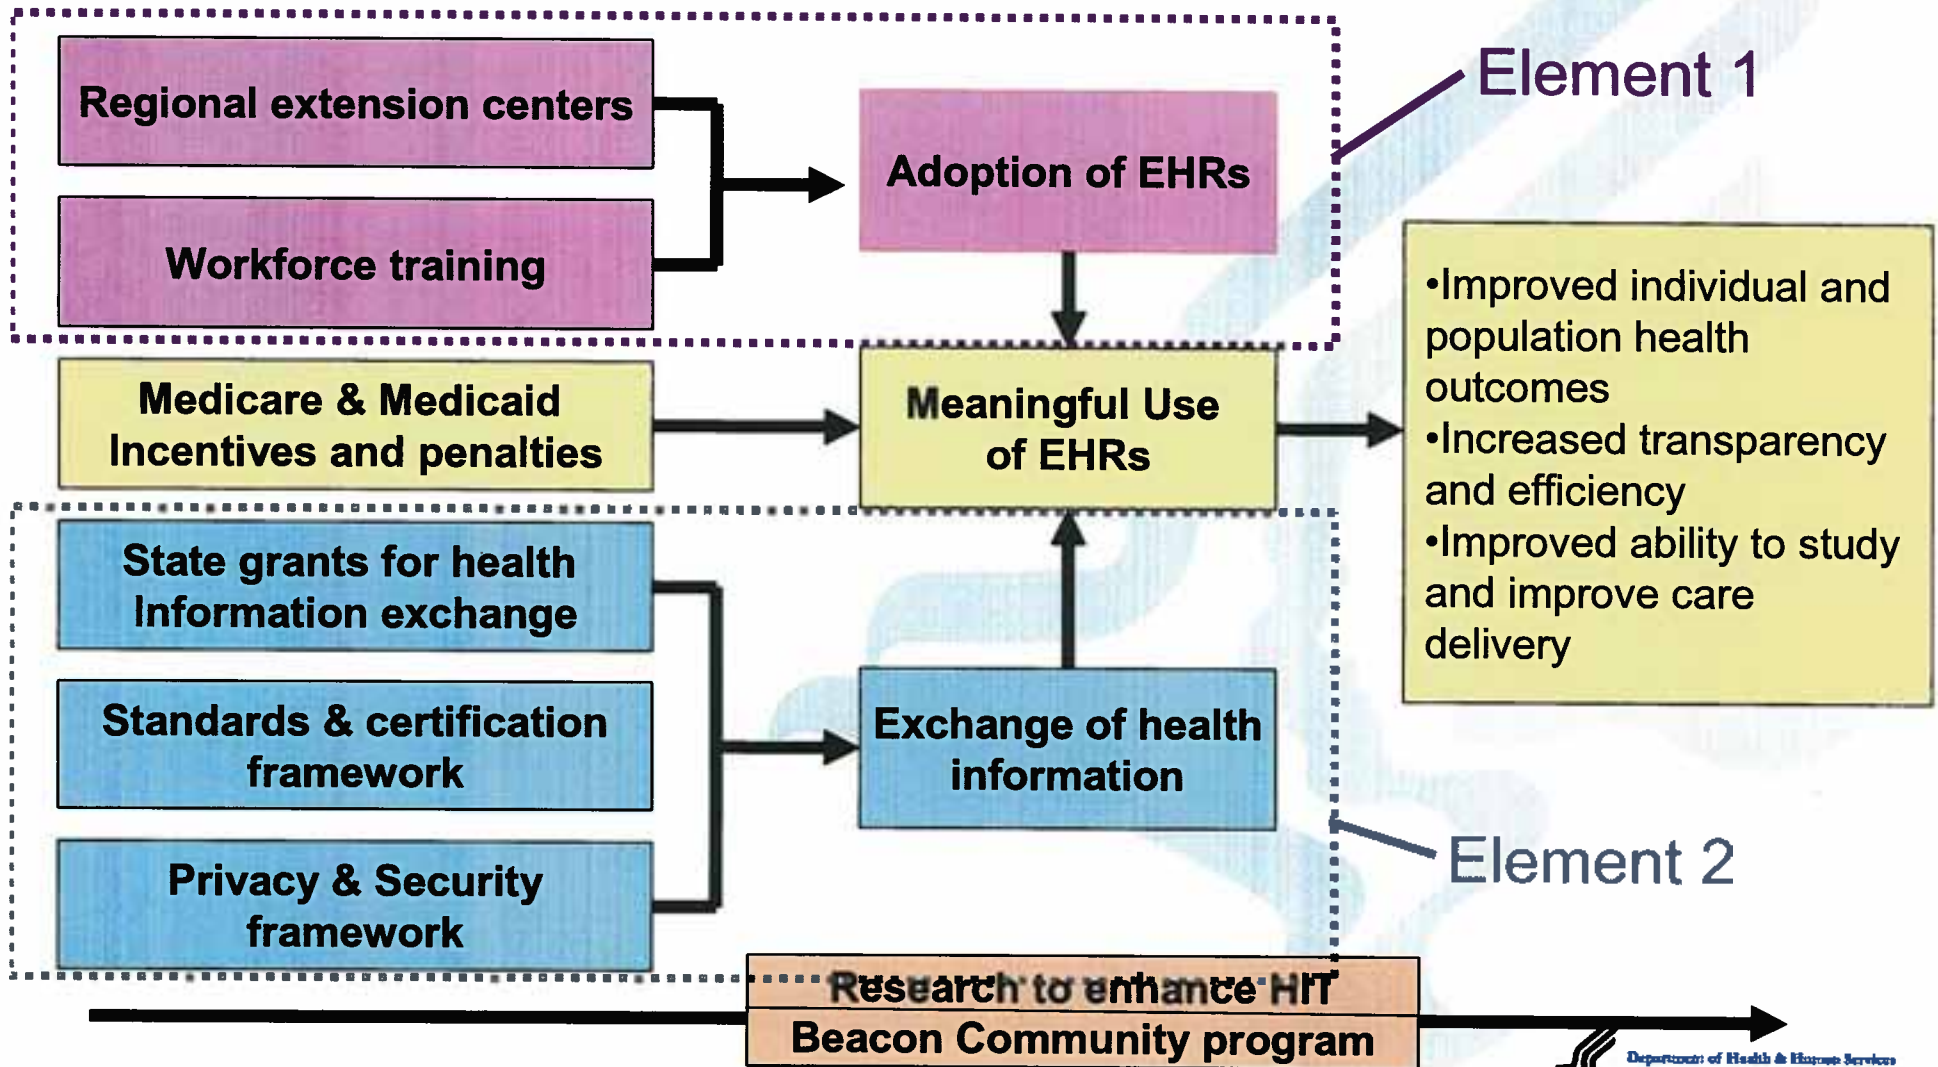

Combining Elements 1 and 2 Enables Meaningful Use

1. Adoption of certified EHRs
2. Health information exchange
3. Quality reporting

ONC/CMS Program to Get to Meaningful Use

Elements 1 and 2 are not Enough!

Need an "Element 3"

Element 3 in Words

Highest level goal:

- By 2015, a federated, integrated learning system for health care quality improvement and population health.

Term Definitions:

- **Learning system**: Data related to individual patients and the care they receive is continuously aggregated, analyzed, and thereby transformed into knowledge that is used to improve care.
- **Population health**: Activities customarily associated with public health; basic, translational, and clinical research; and emergency preparedness.
- **Federation**: Decision makers can assemble from different organizations and locations the data they need without knowing where the relevant data reside.
- **Integration**: Ability to merge data and analyze them in unanticipated ways to discover relationships and generate knowledge.

Element 3 Scenario

- Any authorized person could broadcast a question and have that question applied automatically to relevant data distributed across the nation.
- If the question is “simple” (e.g. <numerator>/<denominator>), the answer would be returned automatically.
- If the question is more complicated, sites across the country with relevant data could return de-identified cases for analysis by the originator of the question.

Observations

- Meaningful Use is necessary but not sufficient for E3
- E3 can't be built on data feeds to persistent databases
- The ONC interoperability framework and services built into the new NHIN can support E3
- There are many E3 players already
 - Government has the biggest business case
 - Some will have negative business case to participate

Components of an E3 Plan

- Recognition of the need
 - All data are fundamentally reusable
- A single technical architecture
 - Not N architectures for N domains
- Explicit data definitions and standards
- A policy and governance structure
 - Resolve consent and data ownership issues
 - Needs a “home”

Multi-Stakeholder Workshops: A First Step

- Convened by IOM
- Sequence of three workshops: July, Sept, Oct
- Report by December 31, 2010

Additional Slides

The Nationwide Health Information Network (NHIN)

A set of **policies**, **standards** and **services** that enable the Internet to be used for secure and meaningful exchange of health information to improve health and health care.

NHIN Exchange and NHIN Direct

- **NHIN Exchange (original project begun in 2005)**
 - Group of participants who have agreed to be part of NHIN Collaborative
 - Focus on patient lookup & summary record exchange
 - Several important efforts live
 - Social security-MEDVirginia
 - VA-DoD-KP
- **NHIN Direct (new initiative)**
 - Designed to support 2011 MU exchanges
 - Simpler “push” scenarios
 - Initial implementation this fall
