DRAFT AGENDA

Meeting Objectives:

1. Identify a balanced and parsimonious set of domains through which multi-sectoral community partnerships can assess, measure and improve local health and well-being. These domains must encompass the key determinants of health and be consistent across all geographic levels.
2. Draft a Roadmap for HHS to advance well-informed, community-driven action by promoting such a set of domains along with suggested measures to facilitate greater availability and use of data within communities.

Suggestions for Questions to Guide the Day:

1. Does this mix of domains proposed resonate as those that describe a healthy, vital community?
2. Should any of the proposed domains NOT be on the list of the top 10-12 domains used to describe and measure what is a healthy, vital community? If so, why?
3. Do you feel that there are critical domains missing? If so, why, and what domain would you replace with such?
4. How can HHS provide neighborhood-level data in the identified areas and/or help communities with data collection or estimation?
