PPX's Powerpoint is on WEDI last week event schedule and shows clinical trial results and document patient User experience.

I know I am coming late to this process, However including PPX as a piece to engaged patients and providers with their data under the theme Data Harmonization or Third Party Entities would provide real life experiences to document what other regulatory enhancements needed and what hasn't work. PPX can compliment the Virtual Clipboard, Care Coordination, Security and Privacy and Health Information Exchange Workgroups giving them real life experiences to evaluate and structure regulations.

I was registered for the upcoming webinar and will participate in the PAG's November 7th meeting. I am available to conduct live virtual demonstration to show the simplicity yet innovated function of PPX.

Below I have attached an updated PPX pdf and I am available to answer any questions.
