

# The NCHS Data Linkage Program: Leveraging the nation's health data for evidence-based decision making

**Lisa B. Mirel**

**Director, Data Linkage Program**

**National Committee on Vital and Health Statistics**

**September 9, 2021**

# National Center for Health Statistics (NCHS)

- Nation's principal health statistics agency
- One of 13 federal statistical agencies
- **Mission:** To provide statistical information that will guide actions and policies to improve the health of the American people. As the Nation's principal health statistics agency, NCHS leads the way with accurate, relevant, and timely data.

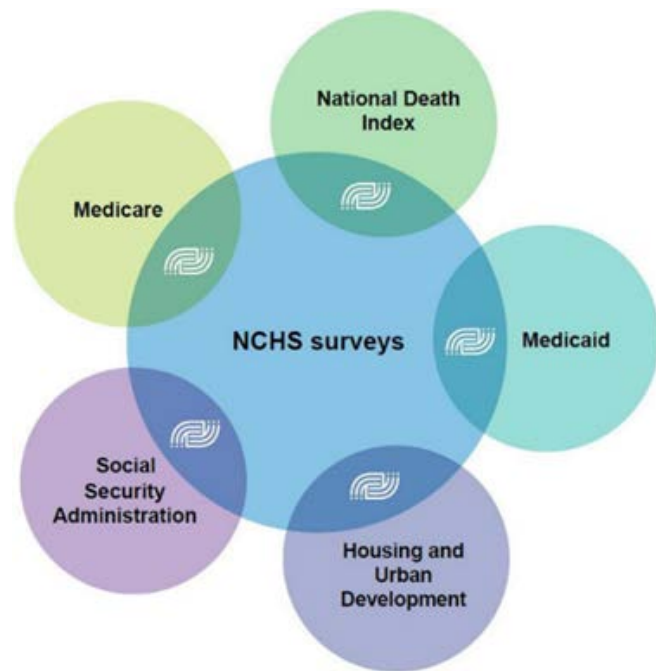

# Policy Questions Require Evidence-Based Answers

- Many pressing policy questions require complex, detailed data
  - *Do Social Security Disability Insurance beneficiaries have access to care during the waiting period before Medicare entitlement?*
  - *Are there adverse health effects associated with the mandatory folic acid fortification policy for grain products?*
  - *How effective are health and housing policies in reducing lead exposure?*

## Data Linkage as a Solution

- Linking data is a powerful mechanism to provide policy relevant information in an efficient way
  - Health survey data are collected to monitor health status, health behaviors and health care access
  - Administrative data are collected for programmatic purposes
- Combining these types of existing data efficiently creates opportunities to answer key health and policy relevant questions

# NCHS Surveys Included in Linkages

## **National Health Interview Survey (NHIS)**

A nationally representative, cross-sectional household interview survey that serves as an important source of information on the health of the civilian noninstitutionalized population of the United States

## **National Health and Nutrition Examination Survey (NHANES)**

A nationally representative, cross-sectional sample of the U.S. civilian noninstitutionalized population, which includes an interview in the household followed by an examination in a mobile examination center

## **National Health Care Surveys**

A family of data collection efforts that gather information about providers of health care services and the patients they serve across the spectrum of health care settings from ambulatory and hospital care to long term care settings

# NCHS Surveys Collect Information on

Health  
behaviors

Health  
conditions

Socioeconomic  
status

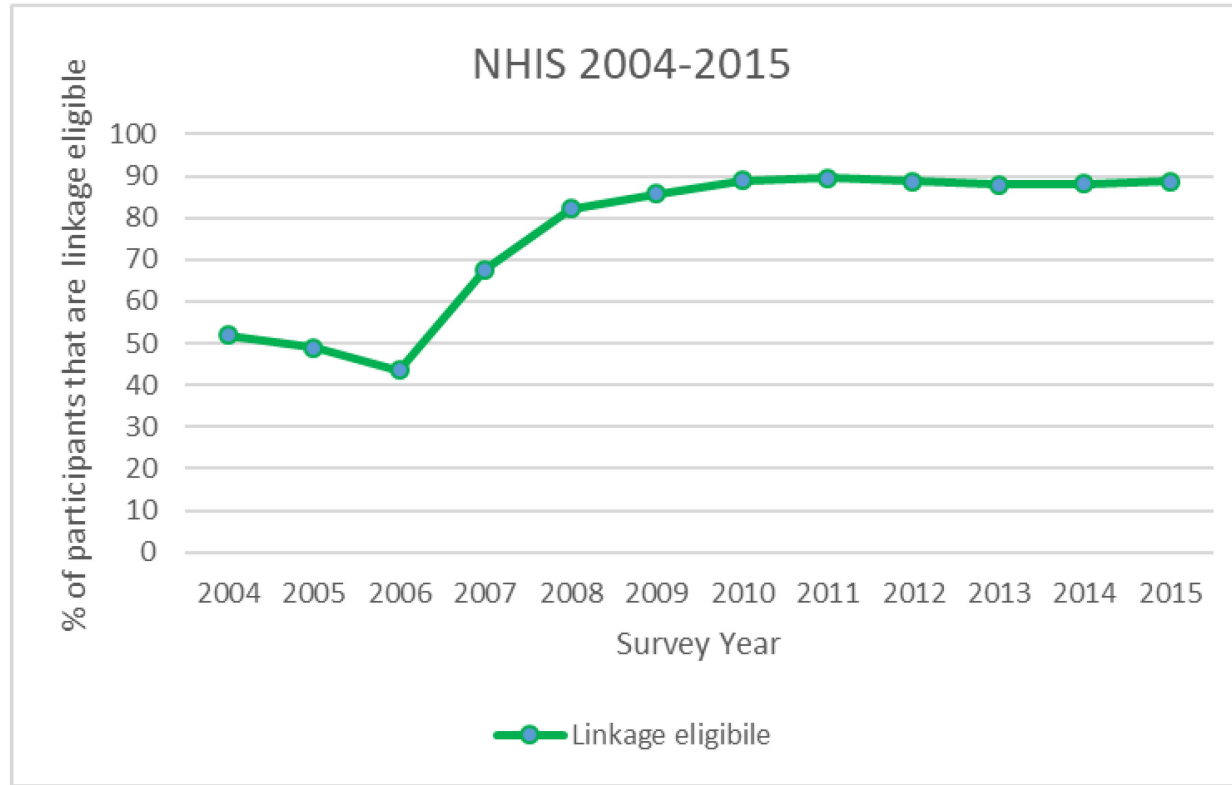

Healthcare access  
and utilization

# Linkage Eligibility

- Only NCHS survey participants who have provided consent as well as the necessary personally identifiable information (PII) are considered *linkage-eligible*
- NCHS survey participants are informed of NCHS' intent to conduct data linkage activities through a variety of informed consent procedures:
  - Advance letters
  - Participant brochures
  - Signed consent forms
  - Questionnaires

# Percent of NHIS Participants that are Linkage Eligible

Note: NHIS is the National Health Interview Survey; this graph only includes sample adults/ sample children

## Housing and Urban Development

Timing of  
housing  
assistance

Receipt/type of  
housing assistance

## NCHS Survey Data

Population-based household surveys

National healthcare surveys

## Medicare and Medicaid

Healthcare utilization  
and expenditures

## Mortality

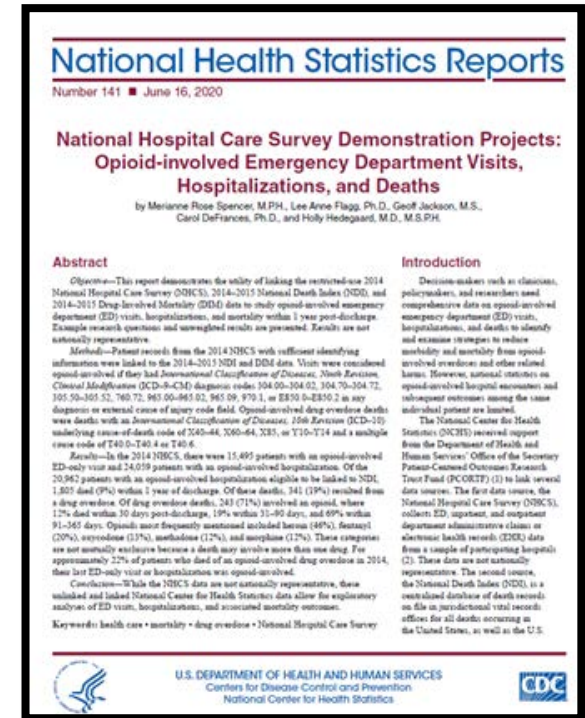

Cause of death  
from National  
Death Index

# Availability of Linked NHIS and NHANES Data

# Linked National Hospital Care Survey data

- Linked electronic health records and claims from the National Hospital Care Survey with Medicare data to provide new resources for patient outcomes research, including evaluating treatment effectiveness and post-acute care utilization
- Linked Inpatient and Emergency Department records with death certificate data to assess 30, 60, 90-day post hospitalization mortality

# Contextual Information through Geocoding

NCHS Data Linkage Program coordinates geocoding of the Center's survey data and death certificates

Parker, J.D., N. Kravets, and A. Vaidyanathan, Particulate Matter Air Pollution Exposure and Heart Disease Mortality Risks by Race and Ethnicity in the United States: 1997-2009 NHIS with Mortality Followup Through 2011. *Circulation*, 2017.

# Examples of Research using NCHS Linked Data

*Over 1,000  
publications based  
on NCHS linked data*

## Linked Mortality Data

- Deaths Associated with Underweight, Overweight, and Obesity
- Diet quality and all-cause mortality
- Educational Differentials in US Adult Mortality

## Linked NCHS-CMS Data

- Characteristics of those who chose Medicare Advantage upon Medicare enrollment
- Health service use among the previously uninsured
- Concordance between survey reported childhood asthma and linked Medicaid

## Linked NCHS-HUD Data

- Housing assistance and blood lead levels
- Cigarette smoking and adverse health outcomes among adults receiving federal housing assistance
- Housing assistance associated with insurance rates and unmet medical need

# NCHS is Creating Resources that Support Evidence Building

Link NCHS survey data with the National Death Index and other health related administrative data

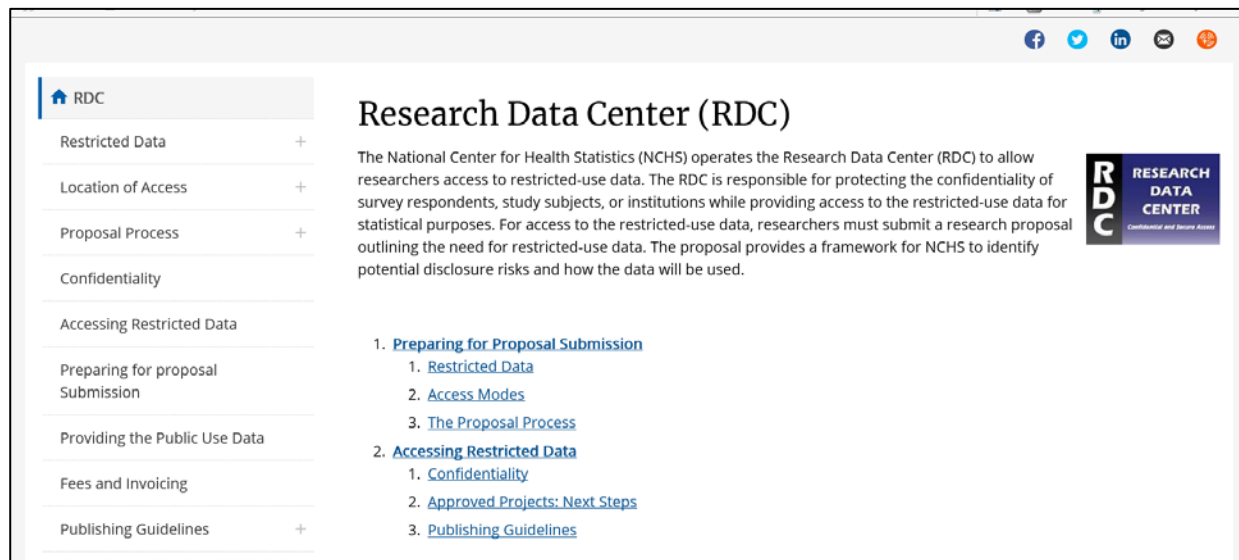

Provide documentation on linkage methodology, linkage quality and analytic guidelines

Release the curated data files for multiple research projects and to replicate the findings of other researchers

# How to Access NCHS Linked Data: Restricted-use Files

- Most linked data products are available through the NCHS and Federal Statistical Research Data Centers

<https://www.cdc.gov/rdc/index.htm>

# Public-use NCHS Linked Data

- Two types of public-use files released by the NCHS Data Linkage Program:

 NCHS Data Linkage

## 2015 Public-Use Linked Mortality Files

Public-use Linked Mortality Files (LMF) are available for 1986-2014 NHIS, 1999-2014 NHIS, and 2005-2014 NHIS. The files include a limited set of mortality variables for adult participants only. The public-use files are NCHS Linked Mortality Files were subjected to data perturbation techniques to reduce the risk of re-identification. For select records, synthetic data were substituted for follow-up time or underlying cause of death information regarding vital status was not perturbed.

### Data Files and Data Dictionaries

- File Description: [Public-Use 2015 LMF](#) [PDF - 175 KB]
- Public-Use Data Dictionary: [2015 LMF](#) [PDF - 101 KB]
- Public-Use Linked Mortality Files: [FTP Site](#)
- Software Programs:
  - [Sample SAS program](#) [SAS - 12 KB]
  - [Sample Stata program](#) [DO - 6 KB]
  - [Sample R program](#)

**2019 public-use file will be released in 2022**

 NCHS Data Linkage

## Public-Use NCHS-CMS Medicare Feasibility Files

To maximize the use of the restricted-use linked NCHS-CMS Medicare files, NCHS has created publicly available NCHS-CMS Medicare Feasibility Study data files that can be downloaded directly from this website.

The feasibility files provide a limited set of variables that can be used to determine the maximum available sample size for each linked file. These files are especially useful to researchers considering whether to initiate a RDC proposal to analyze the restricted-use linked NCHS-CMS Medicare files.

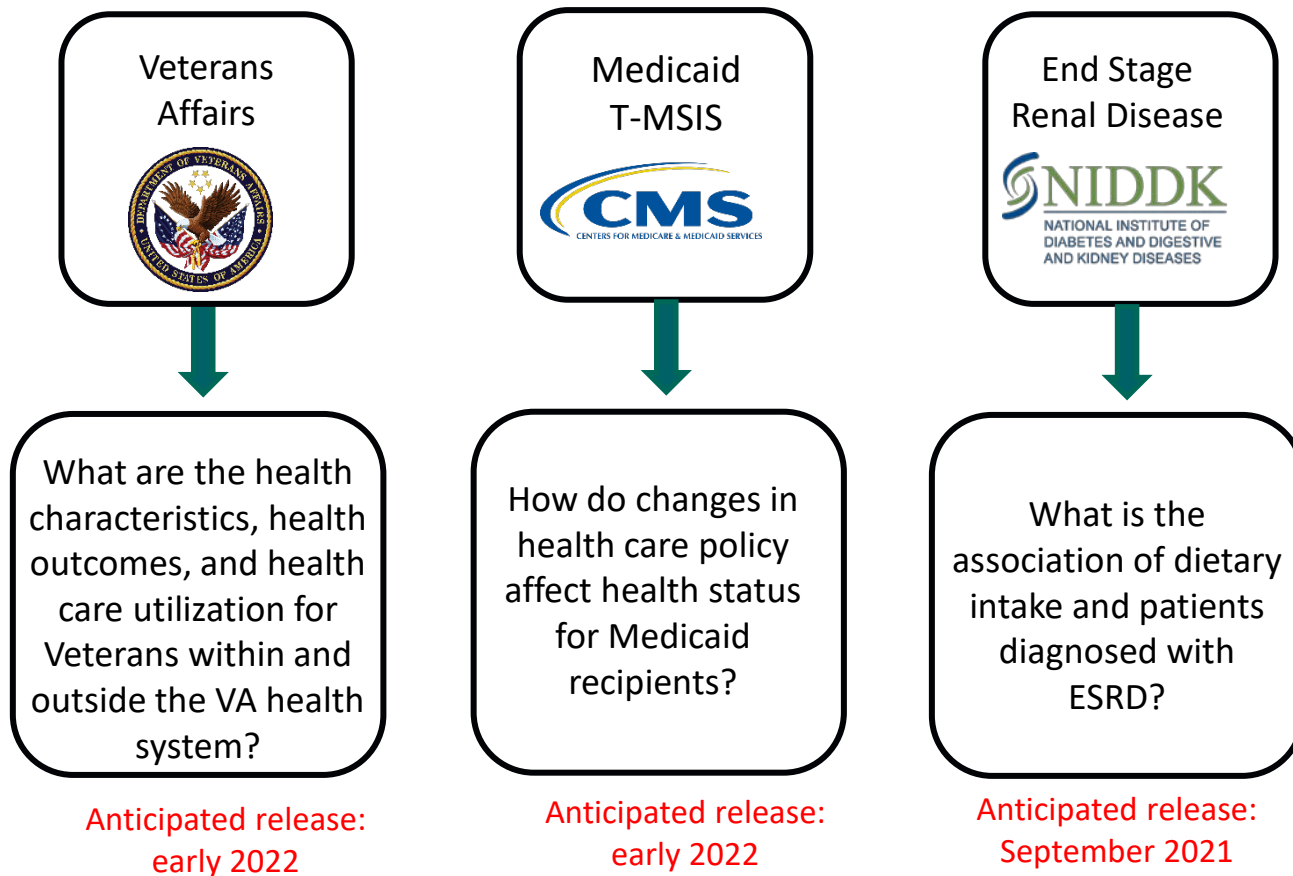

Each feasibility file is NCHS survey and survey-year specific. The following information is included on each feasibility study file:

- NCHS survey public-use identifier
- Survey participant eligibility status for CMS Medicare linkage
- Final match status
- Other variables indicating which specific CMS Medicare data files are available for each successfully linked survey participant

It is important to note that the feasibility study files do not contain any specific information about CMS Medicare benefits.

# Upcoming NCHS Data Linkages

# NCHS Data Linkage Program Future Directions

- **Machine learning:** Incorporating machine learning techniques to improve linkage accuracy and efficiency
- **Encrypted linkage:** Assessing privacy preserving record linkage algorithms to increase linkage activities across health care spectrum
- **Synthetic data:** Piloting innovative methods for public-use linked data files to improve accessibility and reduce disclosure risk
