EDI TECHNOLOGIES, INC.

Healthcare Integration Solutions ©

www.Chiapas-EDI.org

Who are we? How are we connected with X12?

- We are a “boutique” healthcare integration software firm founded in 2010
- Our clients license our software to create in-house EDI solutions with a minimal learning curve
- We are an X12 licensing partner, and X12 invited us to participate in the 8020 Proof-of-concept Program
- We have successfully incorporated the X12 technical materials on 8020, and would like to share some conclusions based on that effort

5010 vs. 8020 – How hard is it?

- For a common, simple provider claim scenario, what would an 8020 file look like, and how hard would it be to implement?

5010 vs. 8020 – How hard is it?

FUTURE STATE – 837 Prof
8020
(CHANGES HIGHLIGHTED)

5010 vs. 8020 – How hard is it?

- The *outbound* Claims can be implemented fairly easily for the most common situations, but changes to the *inbound* remittance file means that additional work is required for claim reconciliation
- From the perspective of a Provider, these changes are not too complex and tie remittance advice remark codes directly to the adjustment, giving more detail about why the adjustment was made

CAS*CO*45*99.7~
...
MOA***N794~

RAS*99.7*CO*45:HE:N794~

8020 X12 XML

- X12 is also introducing an XML schema as an alternative method to transmit and receive compliant transactions
- The actual contents are the same as a normal 8020 EDI file, but the XML format removes the need to make a custom “8020” parser, smoothing the path to adopting the new standards

```

8020 Implementation

- For many basic billing scenarios, Providers can send 8020 bills by making a header change and adding a new segment, and then parsing the new remittance advice that comes back
- For non-basic scenarios, such as implementing Unique Device Identifiers, rebilling, etc., this will require deeper engineering changes on both provider and payer systems
- Finally, X12 is proposing a new way to transmit data in a way that can ease the transition to the new standards

Why make the switch?

ASC X12N/005010X221

Based on Version 5, Release 1

ASC X12 Standards for Electronic Data Interchange
Technical Report Type 3

**Health Care Claim
Payment/Advice (835)**

APRIL 2006

- The original 5010 Implementation Guides were published in 2006 – almost **seventeen years** ago
- Changes have been proposed to the standards to reflect the needs of the *modern healthcare system* as it exists now, not then

Conclusion

- Our EDI infrastructure is a national super power! It is used not just for financial transactions, but to help generate HEDIS childhood immunization rates, analyze trends in patient outcomes, and much more
- The HIPAA mandate to **improve efficiency** can only be achieved when all trading partners are all on the exact same page.
